Gwinnett Health System
2017 Community Benefit Report
Our mission is to provide quality health services to our community.

Our vision is to be the health system of choice in our community by enhancing the health of our patients and other customers.

Our corporate values guide our success:

- Safety is first and foremost
- The customer is at the center of everything we do
- Respect for the individual
- The pursuit of excellence
- Promotion of positive change
- Service to the community

*For purposes of this annual report, we will refer to the system as Gwinnett Medical Center (GMC).*
Dear Neighbors,

For Gwinnett Medical Center, and the communities we serve, fiscal year 2017 was one to remember. In keeping the patient at the heart of all we do, the exceptional care we provide continued to grow in meaningful and innovative ways.

With expanded specialty services, investment in new technology and increased involvement with our community partners, our commitment to the health of the community has never been stronger.

One of the most influential advancements was the partnership between GMC’s trauma team and the national Stop the Bleed campaign. Trauma continues to be one of the most serious health concerns across the country and in our very own community, with over 1,000,000 traumatic injuries every year in Georgia alone.

However, with multiple tourniquet-training events, community members were able to receive the life-saving information they need to help stop the bleed in the event of traumatic injury. In addition, GMC helped to install tourniquet kits in some of the community’s most highly trafficked areas to ensure that life-saving resources are readily available.

This fiscal year also kick-started our annual Paint Gwinnett Pink 5K. With the inaugural event in October 2016, more than 1,000 community members were able to recognize, support and celebrate those who have been impacted by breast cancer. It’s their stories, their determination and their willingness to fight that continually drives GMC’s dedication and commitment to exceptional cancer care.

GMC’s commitment to fighting cancer doesn’t stop there. We also supported proactive colorectal cancer care by providing complimentary at-home colorectal cancer screening kits. In this fiscal year alone, we were able to provide more than 800 kits to community members, as well as connecting them to additional care resources.

Finally, as an active participant in the Junior Achievement program, located at our local Discovery Center, GMC is able to work with Gwinnett County Schools to support the education and development of middle school students both inside and outside of the classroom. This program provides students with a hands-on opportunity to build a variety of skills related to work readiness, entrepreneurship and financial literacy. Through this partnership, GMC associates have the opportunity to support the future of children throughout our community.

In 2017, our commitment to improving the health and wellbeing of community members has motivated us to make these achievements and more. I hope that you continue reading on to see our other notable accomplishments on the pages that follow.

Sincerely,

Philip R. Wolfe, FACHE
President & CEO
Our Commitment

Led by a board made up of community leaders, Gwinnett Hospital System, Inc. (GHS) is a licensed 464-inpatient, 89-skilled nursing bed health system providing quality health services to our community. Through the services of a medical staff of more than 880 physicians, we provide comprehensive medical services for almost 30,600 inpatient admissions and 395,000 outpatient and emergency visits annually. As a not-for-profit health system, all revenue generated above operating expenses is returned to the community through improved services and innovative programs. The hospital system’s charity care policy supports the provision of care for indigent patients, regardless of their ability to pay.

For the purpose of this community benefits report, the term Gwinnett Medical Center (GMC) includes Gwinnett Hospital System.

Gwinnett Medical Center offers a full range of health care services through its two acute-care hospitals: Gwinnett Medical Center-Lawrenceville and Gwinnett Medical Center-Duluth. Additional facilities include: Gwinnett Women’s Pavilion and Gwinnett Extended Care Center (skilled nursing and long-term care) in Lawrenceville; Glancy Rehabilitation Center in Duluth; three outpatient surgical centers; four imaging centers; and outpatient physical, occupational and speech therapy facilities.

Full-time emergency departments operate in both Lawrenceville and Duluth. No one requiring emergency care is denied treatment. The 60-bed emergency department at GMC-Lawrenceville is one of the busiest in Georgia. This location has a 12-bed Children’s Emergency Center, an accredited Chest Pain Center and is designated as a Level II Trauma Center providing 24 hours a day, seven days a week trauma team coverage. Only 28 of the state’s 152 acute-care hospitals are designated trauma centers. GMC-Duluth has a 24-bed emergency department that is stroke care certified.
The 2017 Community Benefit Report is the executive summary of our community benefit plan and follows the guidelines outlined by the Catholic Health Association of the United States, Vizient, Inc. and guidance from the Internal Revenue Service.

Charity care is reported as the cost of care provided and does not include uncollectible charges that the hospital recorded as revenue but wrote off due to failure to pay by the patients. For fiscal year 2017, Gwinnett Hospital System reported $51,043,953 charity care costs.

Medicaid shortfalls are created when a facility receives payments that are less than the cost of caring for the public program beneficiaries. For fiscal year 2017, GMC reported $25,456,772 unreimbursed Medicaid. The cost of community benefit programs at GMC for fiscal year 2017 was $14,443,861.

Total value of quantifiable benefits provided to the community $90,948,855

Community Benefit Definition and Objectives

Programs or activities that provide treatment or promote health as a response to community needs and meet at least one community benefit objective:

- Improve access to health services
- Enhance public health
- Advance increased general knowledge through research
- Relieve or reduce the government burden to improve health
Community benefit activities are not intended to be:
- Provided primarily for marketing purposes
- Required for hospital licensure or accreditation
- Restricted to individuals affiliated with the organization
- Counted as community benefit by another organization or person
- Questionable in the eyes of the community

Community building activities include programs that address root causes of health problems and are captured in the categories of coalition building and workforce development in an effort to enhance public health. According to IRS guidelines, these activities are not usually reported as community benefit; however, some community building activities may also meet the definition of community benefit. Our organization did not participate in these activities to increase referrals or to fulfill regulatory requirements or current standards of care. In fiscal year 2017, $59,732 was reported in community building activities.

According to the IRS, charity care does not include: bad debt or the cost of care provided to patients who fail to pay for services; the difference between the costs of care provided under Medicare and the revenue derived therefrom; or contractual adjustments with any third-party payors. Gwinnett Hospital System, in fiscal year 2017, experienced $95,892,742 in bad debt expenses and Medicare Shortfalls of $29,688,459 excluding the Medicare shortfall reported as part of subsidized services and prior year adjustments.

Subsidized Services

One area of community benefit reporting identified by the IRS is the cost of providing subsidized health services. A hospital service meets an identified community need if it is reasonable to conclude that if the hospital no longer offered the service: 1) the service would be unavailable in the community; 2) the community’s capacity to provide the service would be below the community’s need; or 3) the service would become the responsibility of the government or another tax-exempt organization.

According to the IRS definition, subsidized health services are clinical services provided despite a financial loss to the organization. However, the financial loss is measured after removing losses measured by cost associated with bad debt, charity care, Medicaid and other means-tested government programs. In fiscal year 2017, the total cost to the organization for subsidized services was $3,663,320.

The following were subsidized services provided by GMC in fiscal year 2017:
- Wound Treatment Center
- Diabetes & Nutrition Education Center
- Gwinnett SportsRehab
- Trauma Services
- Dialysis and Renal Services
- Concussion Institute
**Wound Treatment Center**

The Wound Treatment Center is an outpatient program at GMC-Lawrenceville that is dedicated to the treatment of both acute and chronic non-healing wounds. The center’s specialized approach to wound management integrates current assessment, treatment, technology and education to develop a plan of care that is individualized to each patient’s needs.

**Diabetes & Nutrition Education Center**

The Diabetes & Nutrition Education Center provides outpatient and inpatient services and programs at GMC-Lawrenceville and GMC-Duluth. Outpatient services include diabetes education through an American Diabetes Association accredited education program, medical nutrition therapy, weight management programs and community classes to promote health in our community.

**Gwinnett SportsRehab**

Gwinnett SportsRehab provides cost-effective care that will restore strength, mobility and function in order to facilitate a safe return to daily activities. The highly-qualified staff of physical and occupational therapists offers comprehensive assessment and treatment of all types of physical injuries and diagnoses. Specialty programs include orthopedic/sports medicine, lymphedema therapy, amputee rehabilitation, hand therapy, aquatic therapy, arthritis management and oncology rehabilitation. Patients receive an evaluation and customized treatment plan that are designed to address the specific needs of the individual.
**Trauma Program**

The Level II Trauma program located at Gwinnett Medical Center-Lawrenceville provides comprehensive care to patients sustaining traumatic injuries. Resources such as access to diagnostic equipment, operating rooms and blood are readily available. GMC-Lawrenceville has a designated trauma surgeon available 24/7 as well as a trauma nurse specialist, orthopedic, neurosurgery, hand and complex facial trauma specialists.

**Dialysis and Renal Services**

Dialysis and renal services at GMC are performed through contract services with Fresenius Medical Care, which provides all resources, including machines and nursing staff. The fiscal year 2017 goals are to increase patient satisfaction, decrease complications with hemodialysis and meet all Joint Commission requirements. GMC works with Fresenius to assure that all quality measures are in place and monitored monthly.

**The Concussion Institute**

The Concussion Institute serves student athletes, collegiate athletes, professional athletes and adults who have suffered a concussion. Concussions are all too common and frequently not treated comprehensively. The Concussion Institute is committed to improving concussion treatment by increasing awareness of the signs and symptoms of concussions and other head trauma as well as providing state-of-the-art diagnostic and treatment approaches.

**Patient Financial Assistance Policy**

GMC provides financial assistance to Gwinnett County residents who meet the established eligibility requirements. At GMC, our guidelines indicate that indigent care is for a family who has an income that does not exceed 125 percent of the Federal Poverty Income Guidelines. The charity care criteria apply when a family’s income is between 125 and 300 percent of the Federal Poverty Income Guidelines. However, a family that has unusual financial circumstances may qualify for charity care with a reduced patient liability. Families are responsible for making application for these types of financial assistant services.

The financial assistance policy and application is available on the Gwinnett Medical Center website in six languages (English, Spanish, Vietnamese, Korean, Mandarin and Bosnian). Financial counselors are available at all facilities to assist patients and their families with billing questions as well as assisting patients with making application for federal, state and local programs including Medicare, Medicaid and local medical assistance programs for which they may be eligible.

**Billing Services**

GMC provides price estimates in advance of services and treatment at a patient’s request. In addition, our goal is to ensure that our medical bills are accurate and easy to understand. We are committed to finding ways to help every patient pay the portion of their bill they are responsible for without experiencing an overwhelming financial burden. Billing statements include information about how to contact financial representatives and arrange payment plans. If an individual has questions regarding costs associated with services at Gwinnett Medical Center please contact the patient price estimation line at 678-312-4242 (8 a.m. – 4 p.m., Monday through Friday) or email your questions to pricequote@gwinnettmedicalcenter.org.
Our Vision: Investing in our Community

Our vision is to be the health system of choice in our community by enhancing the health of our patients and other customers. We live that vision by joining with physicians, community and other health care organizations to treat injury and disease as well as by providing preventive and early intervention care. The GHS Board of Directors is comprised of community leaders dedicated to providing quality health care to our community. The majority of board members are persons who reside in our primary service area and neither they (nor their family members) are employees or contractors of the organization.

GMC Recognitions/News in 2017

First Class of Residents Graduate
In June, we proudly recognized the graduation of our inaugural class of Graduate Medical Education residents. This class included five family medicine residents, one internal medicine resident and five transitional year residents. To continue advancing the future of medicine, GME welcomes a new class of residents to each program every year.

Introducing Academic Primary Care
To build greater awareness of GMC’s Graduate Medical Education program and its practices and services, the new umbrella brand of Academic Primary Care was created. This new branding strategy will help to support increased patient volumes, as well as the continued growth of the academic program.

GMC Health Park-Hamilton Mill
While GMC Health Park-Hamilton Mill isn’t new to providing exceptional, comprehensive care that’s close to home, there are several new services now available. With the addition of orthopedic and gastroenterology services, community members can continue enjoying an extensive range of health care services for every stage of life.

The Concussion Institute
The Concussion Institute continued to make innovative strides throughout 2016 and 2017, starting by becoming one of the first programs in the U.S. to offer ImPACT testing to pediatric patients. They were then named a provider for current and former professional football players who suffered concussions during their athletic careers.
Urgent Care Center Accreditation
In 2016, GMC began its partnership with ChoiceOne Urgent Care to open two state-of-the-art urgent care centers in Hamilton Mill and Sugar Hill. These centers then went on to be the first in the state of Georgia to be accredited by the Urgent Care Association of America.

Online Scheduling for Gwinnett Medical Group
To make the scheduling process easier than ever, Gwinnett Medical Group introduced online scheduling for all of its primary care practices. This contemporary change to scheduling couples the convenience and comfort of making an appointment 24/7, with the familiarity of seeing a primary care provider.

Named A Top Performing Safety Net Hospital
Gwinnett Medical Center earned a top performance rating from Modern Healthcare for its performance of coronary bypass graft surgery, joining the list of safety net hospitals who are top performers in four clinical areas. Gwinnett Medical Center is the only hospital in Georgia to be included in any of the list, which is determined from CMS data.

Earned Four-Star Quality Rating From New CMS Tool
Gwinnett Medical Center earned a four-star rating from the Centers for Medicare and Medicaid Services’ (CMS) new Hospital Compare rating system – one of only two hospitals in metro Atlanta to receive a four-star rating or better. The rating system is a new service designed by CMS to help patients make decisions about where to receive non-emergency health care.

Community Service Collaborations
GMC values cooperative efforts with community services and other health care providers to improve the health status of area citizens. GMC demonstrates its value for collaborative efforts within the community through many partnerships ranging from partnering with the Gwinnett Coalition for Health and Human Services as a founding and permanent member, to collaboration with AID Gwinnett, J. M. Tull - Gwinnett YMCA, Gwinnett United in Drug Education, Inc., Gwinnett Foster Children’s Foundation and Boy Scouts’ Medical Explorers program. Our organization works closely with the Gwinnett Chamber of Commerce and actively participates in Partnership Gwinnett, which is a comprehensive plan that partners government, education, healthcare and business in an economic development plan. In addition to the Chamber, GMC is involved with individual cities in the county.

GMC is involved with state and county government agencies including Georgia Department of Health and Human Services, Gwinnett Public Health Department, ViewPoint Health, Georgia Trauma Care Network Commission, Georgia State Office of Emergency Medical Services and Trauma, Partnership Against Domestic Violence, Gwinnett County Sexual Assault Center, Gwinnett County Justice System, Gwinnett County Police Department, Gwinnett County Public Library, Gwinnett County Public School System, Department of Family Children Services, Department of Aging Services, Gwinnett County Senior Services and the Georgia Medicare Foundation.
Our Values:  
Service to the Community

In our community, we have found the most effective way to meet the needs of providing community health education, self-help, preventive health and wellness programs, health screenings and support groups is by providing these services at community sites. Our largest community outreach departments, serving the communities of both GMC-Lawrenceville and GMC-Duluth, include Faith Community Nursing, Sports Medicine, Cancer Institute, Health Education & Wellness and Women’s Services. In 2017, more than $5,074,053 was provided in community health improvement services and community benefit programs/outreach operations.
GMC works with national agencies which have local chapters including the American Heart Association, American Red Cross, March of Dimes, American Stroke Association, American Cancer Society, American Diabetes Association and the United Way.

**Faith Community Nursing** has completed more than 20 years of service to the community. Research has shown that people who are healthy in their spiritual and emotional life are better able to cope and become healthier in their physical bodies. GMC encourages faith communities to provide health ministry in their congregations by training, supervising and supporting faith community nurses in their faith communities to promote whole person health. Faith community nurses function as case managers, personal health counselors, educators and volunteer coordinators for creative programs to improve the health of community members. In fiscal year 2017, the program made more than 43,911 community member contacts for both GMC-Lawrenceville and GMC-Duluth. Our relationships with area faith communities are a key link in providing health outreach. Last year the Faith Community Nursing program collaborated with more than 250 service agencies.

**Health Education & Wellness Services (HEWS)** is responsible for planning, coordinating and providing health education programs and services for community members from both GMC-Lawrenceville and GMC-Duluth. Activities include PrimeTime Health, Physician’s Speakers Bureau and fitness classes. PrimeTime Health is a senior program providing health information to meet the needs of community members over 50 years of age. In fiscal year 2017, HEWS had 3,637 community contacts.

**The Diabetes & Nutrition Education Center (DNEC)** provides outpatient services at both GMC-Lawrenceville and GMC-Duluth. Outpatient services include an American Diabetes Association accredited diabetes education program. In addition, insulin pump training, nutrition, weight management, prediabetic and bariatric surgical weight management consultations are offered. The staff includes registered nurses and registered dietitians who are certified diabetes educators. DNEC had a total of 10,983 outpatient contacts which include clients and community groups in fiscal year 2017. As a resource to the community, the center strives for adequate access to and excellence in diabetes and nutrition education that positively impacts lives. DNEC is a resource to our community including physicians and community groups as well as departments within the hospital. The Diabetes Education Grant Program is sponsored by Cisco Systems, Inc. and has provided diabetes education to 609 uninsured patients.

The **Center for Neuroscience** leads our organization’s efforts in maintaining our primary stroke center certification by the Joint Commission. The elements are surveyed on-site every two years. In addition, interim data is submitted annually, which includes leadership support, processes for timely and appropriate treatment, guideline updates and education to providers, patients and the community as well as performance improvement efforts. Since February 2005, both GMC-Lawrenceville and GMC-Duluth have been certified as primary stroke centers. Community education is supported through the efforts of the nursing team who provide presentations and screenings for at-risk groups. In fiscal year 2017, the center’s community outreach programs had 1,514 participants.

**Glancy Rehabilitation Center** has 30 rehabilitation beds and is located in Duluth. It has a comprehensive, interdisciplinary treatment program designed to help survivors of stroke, accident or debilitating illness increase their level of functioning and independence. In addition to the inpatient program, the center provides support for a peer visitor program and four support groups with a total of 894 persons served in fiscal year 2017.
Women’s Services are provided at the Gwinnett Women’s Pavilion, located at GMC-Lawrenceville. This facility has 35 Mother/Infant Unit beds and 15 High-Risk Pregnancy Unit beds and is a leading provider of obstetrical services in the state. Services provided at this facility include the High-Risk Pregnancy Unit, labor and delivery suites and the Level III Neonatal Intensive Care Unit (NICU). In fiscal year 2017, the Gwinnett Women’s Pavilion had 5,365 deliveries and the NICU had 594 admissions. Community education programs provided by Women’s Services include childbirth education, lactation support, infant and child safety as well as additional classes to meet the educational needs of women of all ages with 11,657 community contacts for fiscal year 2017.

Oncology Services’ mission is to offer the citizens of our community compassionate cancer care in partnership with our patients and physicians through a network of integrated services and programs promoting the delivery of health and wellness. Our program is accredited through the Commission on Cancer of the American College of Surgeons and the National Accreditation Program for Breast Centers. Our professional healthcare services include 4 infusion centers, 11 oncologists, 6 advanced practitioners, an advanced practice genetics/cancer risk specialist nurse practitioner, two breast nurse navigators, a thoracic oncology nurse navigator, two oncology social workers, one oncology dietitian and an American Cancer Society (ACS) patient navigator. In fiscal year 2017, the Cancer Support Center saw 144 breast biopsy patients, 649 low dose CT screenings for lung cancer, 237 in office consults with the ACS navigator, 435 in office consults with the social workers, 176 patients saw the dietitian and 258 saw the advanced practice genetics/cancer risk specialist nurse practitioner. We had several community events including Paint Gwinnett Pink 5k for breast cancer awareness, Shine a Light on Lung Cancer, Colon Cancer Awareness events and Skin Cancer screening events.

The Level II Trauma Center at GMC-Lawrenceville cares for patients who have sustained trauma-related injuries in Gwinnett County and the surrounding area. Our trauma center is one of only 28 in the state. In fiscal year 2017, the Trauma Services department reported 1,514 trauma patients on the registry.
The Sports Medicine Program was established with the goal of improving the level of care and access to care provided to athletes in Gwinnett County. The department offices are at GMC-Duluth. Under the direction of the Sports Medicine Committee physicians, the athletic trainers are responsible for the care of injured athletes, from adolescents to geriatrics, at community sporting events (including 18 high schools in Gwinnett County in addition to high schools in surrounding counties and Georgia Gwinnett College) at no cost to community members. The athletic trainers assess, educate, instruct and treat athletes with movement dysfunction, emergency injuries or physical disabilities, both acute and chronic. The athletic trainers administer immediate, on-site medical care and develop an ongoing plan of care based on the nature of the injury. In fiscal year 2017, our certified athletic trainers provided direct on-site care in over 55,000 encounters.

In addition, the program has continued a county-wide concussion testing program called ImPACT. This initiative provided free neuro-cognitive baseline testing for 21 high schools, three private schools, one local college. In 2017, Sports Medicine launched the Concussion Care-a-Van as a way to extend our concussion education statewide. It is the first of its kind in the Southeast. This concussion program potentially touched every high school football, basketball and soccer player as well as youth athletes in the county. More than 20,000 baseline tests were provided in fiscal year 2017.
Training and Education

The Learning Resources department coordinates the majority of health professional education training at GMC. In fiscal year 2017, over 1,900 students participated in professional training for many specialties including nursing, cardiology technicians, chaplaincy, dietitians, corporate counsel, diabetes educators, health information management, emergency medical services, exercise and health science, health informatics, laboratory technologists and phlebotomists, nuclear medicine technologists, pharmacists, radiology technicians, rehabilitation physical, occupational and speech/language therapists, social workers, surgical technicians, ultrasound technologists and elementary and high school programs.

Conclusion

Gwinnett Medical Center is committed to transforming healthcare in our community. We continue to provide the quality of care and clinical excellence that this community has come to expect, and strive to identify and plan for future needs.

The health care needs of the community continue to evolve with our changing demographics, and as an organization, we continue to adjust to meet these needs. GMC provides a wide range of services to meet medical needs, whether wellness-based services, acute illnesses or chronic conditions.

Patient safety and quality care are of the utmost importance, and GMC has increasingly implemented measurements and systems to ensure these meet the highest standards in the nation. As GMC continues to face the financial challenges of operating a growing health care system with ever-changing pressures of socioeconomic and governmental influences, we strive to be proactive in meeting our community’s growing identified health care needs.
